

Opportunity for a Linux Software Engineer

WML has an opening for an enthusiastic Linux software engineer. Salary to be commensurate with experience.

WML provides computer software and hardware primarily to the Insurance and Retail sectors. WML also develops, supplies and supports software and hardware for thin-client computing environments. All our products are based on the Linux platform. This opportunity will particularly appeal to those with a keen interest in programming for GNU/Linux.

WML is an expanding business working from prestigious offices in Sheffield.

Working in a small team, your duties will include:

- Customer support provided remotely and on-site across the UK.
- Writing code to deliver new features for our software.
- Testing code written by other members of the team.
- Documenting code written by yourself, or other members of the team.
- Communicating effectively with technical and non-technical customer staff members verbally and in writing.

To be successful in this role, you will need to be able to:

- program in the C++ language.
- program the client-side of web-based applications (Javascript/HTML).
- work with the Linux operating system as a programming environment.
- write well to document code and communicate with customers.

The following are desirable:

- knowledge of the CUPS printing system
- knowledge of the PDF document format
- knowledge of TCP/IP and SSL network programming techniques
- familiarity with the GNU Autotools directed-compilation system.
- current UK driving licence.

How to apply

Application by C.V. with a covering letter outlining how your skill and experience could contribute to WML's continued success to: **Sebastian James** <sjames@wmltd.co.uk>

Attachments in **PDF, ODF** or another open-standard format only, please.

The deadline for this job opportunity is **14th September 2009**.
